

Rubén Brito

Software Engineer – Full-stack & platform engineering for credit risk systems

✉ britoruben1984@gmail.com · 📍 Madrid, Spain

🌐 LinkedIn · 🐙 GitHub · 🌐 Portfolio

👤 SUMMARY

Software Engineer with 11 years across banking, telecom and consulting, based in Madrid. At Santander UK since 2019, on the credit risk and scoring systems behind retail and corporate lending – owned end to end, from architecture and API contracts through delivery pipelines to how the services run in production: autoscaling, resource tuning and monitoring. Delivered one of Santander's earliest Machine Learning proofs of concept in risk decisioning in 2017–2018; today, custom MCP agents take the repetitive engineering work off the team.

🛠️ WORK EXPERIENCE

Santander UK • Software Engineering Specialist

Nov 2019 – Present, United Kingdom (Remote)

Based in the UK 2019–2021, remote from Madrid since.

- Own credit risk and scoring models across retail and corporate banking, driving improvements to risk processes and controls.
- Take the services behind them from architecture and API contracts to production on OpenShift – delivery pipelines, load balancing, autoscaling, resource tuning and monitoring – running at ~100k requests/day on the core API and 5–10k/day across supporting services.
- Advise technical architects on integration and security architecture decisions.
- Run dependency and library vulnerability management end to end: analysis, remediation, and the CI pipelines that enforce it.
- Built the team's internal monitoring dashboard, replacing manual SQL queries with live case visibility.
- Automate engineering workflows with custom MCP agents and Devin – SonarQube issue triage and Jira-driven branch creation.

Java Python Spring Node.js Kafka Docker OpenShift

UST Global Spain • Software Developer

Jan 2019 – Nov 2019, Madrid

- Backend and API development for Inditex's Center of Excellence, including a Kafka + Apache Flink real-time monitoring dashboard providing alerting and traceability across internal and external APIs.

Gfi Spain • Software Developer

May 2015 – Jan 2019, Madrid area

- Joined through the final-year internship programme and hired onto the permanent staff in October 2015. Architecture department, delivering engineering work on client engagements across telecom, security and banking.

• Telefónica

Jan 2016 – Dec 2016

- Telco 3.0 – implemented REST architecture in the customer retention system.
- Requirements analysis and technical documentation, using Agile methodology.

Oracle BPM Java Spring AngularJS

• Securitas Direct

Jan 2017 – Aug 2017

- Cross-platform iOS/Android field application for door-to-door sales teams – customer information, contracting and retention on tablet, integrated with Securitas Direct's internal APIs.

Ionic Java Spring MongoDB

• Santander Global Tech

Sep 2017 – Dec 2018

- Risk Department – delivered one of Santander's earliest Machine Learning proofs of concept, integrating predictive models into the credit decisioning workflow.
- Improved affordability assessment in both directions: surfacing approvals that carried undetected repayment risk, and identifying creditworthy applicants the existing rules were declining.
- Developed an API exposing risk prediction functionality for sales and financial products.

PMML R Python Spring Boot TIBCO BW 6 IBM API Connect AngularJS

🎓 EDUCATION

Enrique Tierno Galván

2014 – 2015

Higher Education in Multiplatform Application Development

- Spanish higher vocational qualification (Ciclo Formativo de Grado Superior). One-year program: first-year credits transferred from the Web Application Development qualification below.

Domenico Scarlatti

2012 – 2014

Higher Education in Web Application Development

- Spanish higher vocational qualification (Ciclo Formativo de Grado Superior).

LANGUAGES

Spanish Native

English Professional working proficiency

TECHNICAL SKILLS

Languages Java, Python, JavaScript / Node.js, R

Platform & Runtime OpenShift, Docker, AWS (S3, Lambda, Athena, CloudWatch), Terraform, Autoscaling & resource tuning, Load balancing

Data & Streaming Kafka (MSK & on-premise), Redis, Oracle, MongoDB, SQL, NoSQL

Integration & APIs REST API & contract design, API gateways (IBM API Connect/DataPower, CA), TIBCO BusinessWorks, Oracle SOA Suite

Security Dependency & library vulnerability management, CI security pipelines, OAuth2 / JWT (client credentials, resource owner)

Observability Kibana, Dynatrace, Zipkin, Grafana

Testing & Quality Cucumber, Postman, Bruno, JMeter, Chaos Monkey, SonarQube

AI & Automation Custom MCP agents (GitHub, Jira, Confluence, SonarQube, Elasticsearch), Claude Code, GitHub Copilot, OpenAI Codex, Devin, LLM-based predictive modeling

Practices Microservices architecture, Agile methodology, ETL & data modeling, CI/CD (GitHub Actions, Jenkins, GitLab CI)
